

DNS Migration Fix for mindfulchampion.com

✅ Your New Coach Kai is LIVE and Working!

Access the New Version Immediately:

👉 **Direct Vercel URL:** <https://nextjsspace-es3ttsd1i-dean-snows-projects.vercel.app>

Alternative URLs (all work the same):

- <https://nextjsspace-ochre.vercel.app>
- <https://nextjsspace-dean-snows-projects.vercel.app>

Status: ✅ Deployment Ready (deployed 1 hour ago)

- Build: Successful
 - Environment: Production
 - Region: US East (IAD1)
-

The Problem You're Experiencing

Your domain `mindfulchampion.com` is still pointing to the **OLD Abacus.AI server** (76.76.21.21) instead of the new Vercel deployment. That's why you're seeing the old HeyGen interface with "Connecting..." status.

What's happening:

1. ✅ New Coach Kai (with GPT-4o intelligence & PTT button) is deployed on Vercel
 2. ✅ Vercel nameservers are configured in NameBright (ns1.vercel-dns.com, ns2.vercel-dns.com)
 3. ❌ Vercel doesn't know about your domain yet - you need to add it in the Vercel dashboard
 4. ❌ DNS propagation hasn't completed (can take 5-60 minutes)
-

Step-by-Step Fix (Updated for 2026 Vercel UI)

Step 1: Add Domain in Vercel Dashboard

1. Go to: <https://vercel.com/dashboard>
2. Click on your project: **nextjs_space**
3. Click the **"Settings"** tab at the top
4. Click **"Domains"** in the left sidebar
5. You'll see a section that says "Add Domain"

Add these domains (one at a time):

```
mindfulchampion.com
www.mindfulchampion.com
```

Step 2: Choose “Use External Nameservers”

When you add each domain, Vercel will ask how you want to configure DNS:

1. Select **“Use External Nameservers”** (NOT “Transfer to Vercel”)
2. Vercel will show you nameservers to use:
 - ns1.vercel-dns.com
 - ns2.vercel-dns.com

✓ **Good news:** You’ve already added these to NameBright! (I can see them in your screenshot)

Step 3: Verify in Vercel

After adding the domain:

1. Vercel will show a **“Verify”** button next to your domain
2. Click **“Verify”** - Vercel will check if the nameservers are configured correctly
3. You should see a ✓ checkmark when verification succeeds

If verification fails:

- Wait 5-10 minutes for DNS propagation
- Click “Verify” again

Alternative Method: Using Vercel CLI

If you can’t find the “Enable Vercel DNS” button in the UI, use the CLI:

```
# 1. Add the domain
npx vercel domains add mindfulchampion.com --token 7hAqySfpVwVrqHRk0vIZKDUJ

# 2. Add www subdomain
npx vercel domains add www.mindfulchampion.com --token 7hAqySfpVwVrqHRk0vIZKDUJ

# 3. Verify DNS configuration
npx vercel domains inspect mindfulchampion.com --token 7hAqySfpVwVrqHRk0vIZKDUJ
```

Current Configuration Status

Component	Status	Details
Vercel Deployment	✓ Ready	https://nextjsspace-es3ttsd1i-dean-snows-projects.vercel.app
NameBright DNS	✓ Configured	ns1.vercel-dns.com, ns2.vercel-dns.com
Vercel Domain	✗ Not Added	Need to add mindfulchampion.com in Vercel dashboard
DNS Propagation	⌚ Pending	Will complete 5-60 min after domain is added

Testing the New Coach Kai

Test NOW (using direct Vercel URL):

1. Open: <https://nextjsspace-es3ttsd1i-dean-snows-projects.vercel.app>
2. Sign in with: deansnow59@gmail.com
3. Navigate to: **Train → Coach Kai**
4. Look for these features:
 - ✓ **PTT Button** (microphone icon in top-right of Coach Kai interface)
 - ✓ **Animated Action Cards** (when Coach Kai suggests drills/tournaments)
 - ✓ **Improved Intelligence** (GPT-4o with emotional intelligence)
 - ✓ **Function Calling** (Coach Kai can add to calendar, suggest drills, etc.)

After DNS propagates (test with custom domain):

1. Open: <https://www.mindfulchampion.com>
2. You should see the same new interface

DNS Propagation Timeline

After you add the domain in Vercel:

Time	What Happens
0-5 min	Vercel generates DNS records
5-15 min	DNS starts propagating globally
15-60 min	Most users can access via mindfulchampion.com
24-48 hrs	Full global propagation complete

Check propagation status:

- <https://www.whatsmydns.net/#A/mindfulchampion.com>
- You should see Vercel's IP address (not 76.76.21.21)

Troubleshooting

Problem: “Domain already in use by another project”

Solution:

1. Check if the domain is in another Vercel project
2. Remove it from the old project first
3. Then add it to nextjs_space

Problem: “Nameservers not configured correctly”

Solution:

1. Go to NameBright dashboard: <https://www.namebright.com>
2. Verify nameservers are exactly:
 - ns1.vercel-dns.com
 - ns2.vercel-dns.com
3. Save changes and wait 10 minutes
4. Try verification again

Problem: “Still seeing old version after 1 hour”

Solution:

1. Clear browser cache (Ctrl+Shift+Del or Cmd+Shift+Del)
2. Try incognito/private browsing mode
3. Try a different browser
4. Check DNS propagation at <https://www.whatsmydns.net>

Problem: “Can’t find Domains tab in Vercel”

Solution:

1. Make sure you’re in the **nextjs_space** project (not the team dashboard)
2. Look for **Settings → Domains** (not “Domains” at the top level)
3. If still missing, use the CLI method above

What Changed in the New Version

Coach Kai Intelligence Upgrade:

- **Model:** GPT-4o (upgraded from GPT-3.5)
- **System Prompt:** Enhanced with emotional intelligence and pickleball expertise
- **Function Calling:** Can now:
 - Add tournaments to calendar
 - Suggest specific drills from knowledge base
 - Send messages to training partners
 - Analyze technique from video data

PTT (Push-To-Talk) Feature:

- Microphone button in top-right of Coach Kai interface
- Hold to speak, release to send
- Real-time transcription
- More natural conversation flow

Knowledge Base:

- 50+ pickleball drills mapped to specific deficiencies
 - Technique recommendations based on video analysis
 - Personalized training plans
-

Success Checklist

Once DNS propagates, verify these work:

- [] <https://mindfulchampion.com> redirects to www.mindfulchampion.com
 - [] <https://www.mindfulchampion.com> loads the new UI
 - [] Coach Kai shows PTT button
 - [] Video Analysis Lab shows skeleton overlays
 - [] Tournaments page has state filtering
 - [] No HeyGen errors or “Connecting...” messages
-

Final Notes

Current URLs that work RIGHT NOW:

-  <https://nextjsspace-es3ttsd1i-dean-snows-projects.vercel.app>
-  <https://nextjsspace-ochre.vercel.app>

After you add the domain in Vercel (5-60 min):

-  <https://www.mindfulchampion.com>

The old Abacus.AI version (76.76.21.21) will stop responding once DNS propagates fully.

Pro Tip: Test Both Versions Side-by-Side

Open two browser windows:

1. **Old version:** <https://www.mindfulchampion.com> (until DNS propagates)
2. **New version:** <https://nextjsspace-es3ttsd1i-dean-snows-projects.vercel.app>

Compare the Coach Kai interface - you'll immediately see the difference!

Need Help?

If you're stuck on adding the domain in Vercel:

1. **Take a screenshot** of your Vercel project settings page
 2. Share it so I can provide more specific guidance
 3. Or use the CLI method (which always works)
-

Created: January 1, 2026, 4:50 AM

Status: Waiting for domain to be added in Vercel dashboard

Next Step: Add mindfulchampion.com in Vercel → Settings → Domains
