

Vercel Dashboard Visual Guide (2026 UI)

Where to Click to Add Your Domain

Step-by-Step with Visual Cues

1 Open Vercel Dashboard

URL: <https://vercel.com/dashboard>

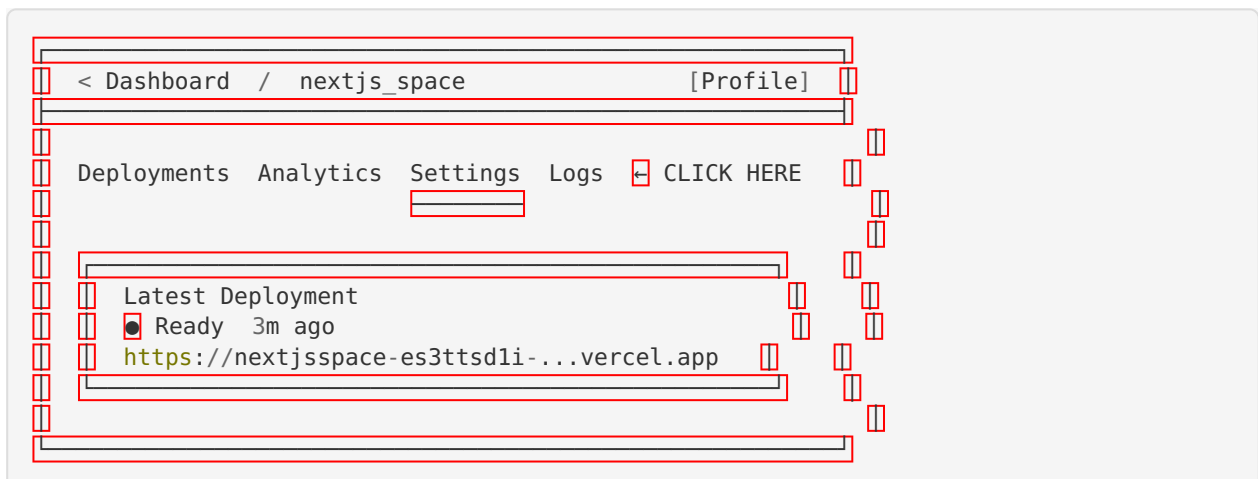

What to do:

- Click on “nextjs_space” project card

2 Project Settings Tab

After clicking the project, you'll see:

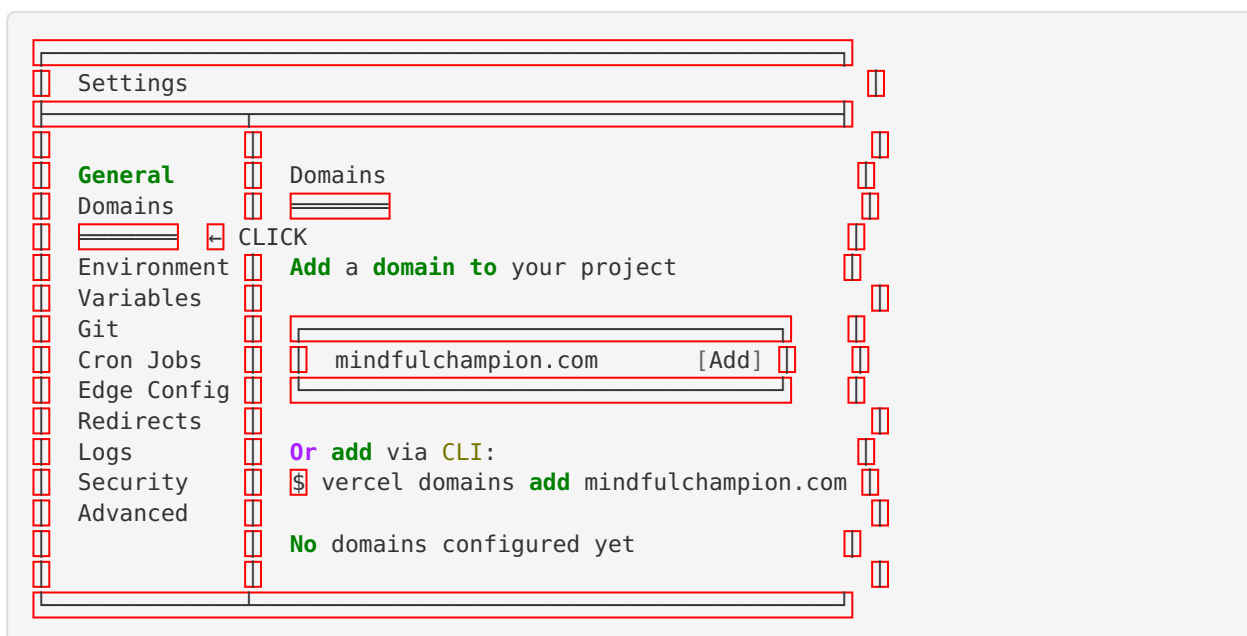

What to do:

- Click on **“Settings”** tab at the top

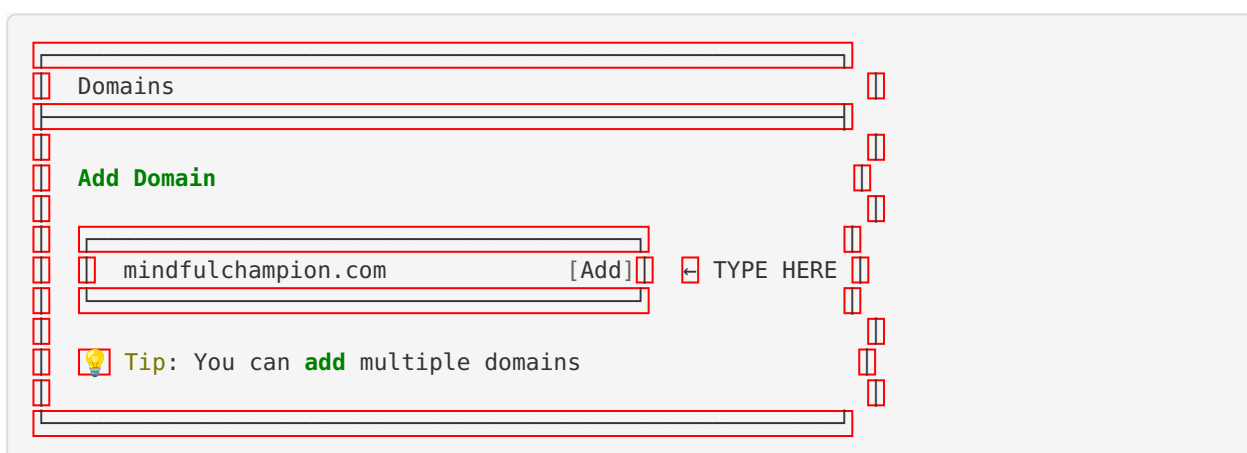

3 Domains Section

In the Settings page, look at the left sidebar:

**What to do:**

- Click on **“Domains”** in the left sidebar
- You'll see a text input field

4 Add Domain Input

**What to do:**

1. Type: mindfulchampion.com
2. Click **“Add”** button

5 DNS Configuration Choice

After clicking “Add”, you’ll see this popup:

Configure DNS for mindfulchampion.com

How would you like to configure DNS?

☒ Use External Nameservers (Recommended) **SELECT**
Use nameservers from your domain registrar

☐ Transfer Domain to Vercel
Transfer domain management to Vercel

[Cancel] [Continue]

What to do:

1. Select “Use External Nameservers”
2. Click “Continue”

6 Nameserver Instructions

Vercel will show you this screen:

Configure DNS for mindfulchampion.com

✓ Step 1: Update Nameservers at NameBright

Add these nameservers to your domain:

ns1.vercel-dns.com [Copy]

ns2.vercel-dns.com [Copy]

✓ You've already done this! (seen in your screenshot)

DNS propagation: 5-60 minutes

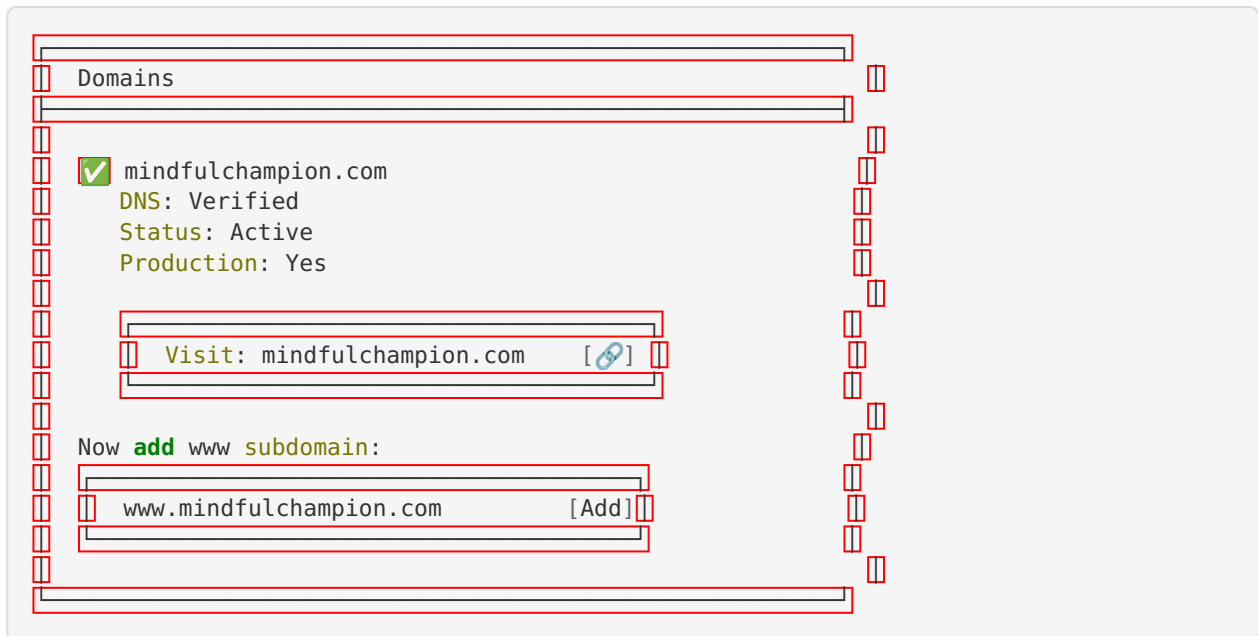

[Verify DNS] CLICK AFTER 5 MIN

What to do:

1. Since you’ve already added nameservers to NameBright ✓
2. Wait **5-10 minutes**
3. Click “Verify DNS”

7 Verification Success

After DNS verification succeeds:

What to do:

- Repeat for **www.mindfulchampion.com**
- Vercel will automatically set it as an alias

If You Can't Find "Domains" Tab

Alternative 1: Project Overview

Some Vercel accounts show domains differently:

Look for:

- 🌐 **Domains** section on the main project page
- Or a "+ **Add Domain**" button near the top

Alternative 2: Use CLI (Always Works)

If the UI is confusing, just use terminal commands:

```
# 1. Navigate to your project
cd /home/ubuntu/mindful_champion/nextjs_space

# 2. Add the domain
npx vercel domains add mindfulchampion.com \
  --token 7hAqySfpVwVrqHRk0vIZKDUJ

# 3. Add www subdomain
npx vercel domains add www.mindfulchampion.com \
  --token 7hAqySfpVwVrqHRk0vIZKDUJ

# 4. Check status
npx vercel domains ls --token 7hAqySfpVwVrqHRk0vIZKDUJ
```

What “Verified” Looks Like

When DNS is fully configured, you’ll see:

Domains for nextjs_space

```

✓ mindfulchampion.com
  DNS: ns1.vercel-dns.com, ns2.vercel-dns.com
  Status: Active
  Redirect: → www.mindfulchampion.com

✓ www.mindfulchampion.com
  DNS: ns1.vercel-dns.com, ns2.vercel-dns.com
  Status: Active
  Production: Yes
```

Visual Checklist

Use this to confirm you’re in the right place:

- ☐ I’m logged in to Vercel
- ☐ I can see “nextjs_space” in my projects
- ☐ I clicked on the project name
- ☐ I see tabs: Deployments, Analytics, Settings, Logs
- ☐ I clicked “Settings”
- ☐ I see “Domains” in the left sidebar
- ☐ I see an input field to add a domain
- ☐ I typed “mindfulchampion.com”
- ☐ I clicked “Add”
- ☐ I selected “Use External Nameservers”
- ☐ I clicked “Continue”

- [] I see nameservers: ns1.vercel-dns.com, ns2.vercel-dns.com
 - [] I waited 5-10 minutes
 - [] I clicked “Verify DNS”
 - [] I see  next to my domain
-

Take Screenshots If Stuck

If your Vercel UI looks different:

1. **Take a screenshot of:**
 - Your project overview page
 - Your settings page
 - Any error messages
 2. **Share screenshots so I can provide exact guidance**
-

Success Indicators

You'll know it worked when:

1. **In Vercel:**
 -  Green checkmark next to mindfulchampion.com
 - “Status: Active” shows under domain
 2. **In Browser:**
 - <https://www.mindfulchampion.com> loads the NEW interface
 - No “Connecting...” errors in Coach Kai
 - PTT button appears in Coach Kai
 3. **DNS Check:**
 - <https://www.whatsmydns.net/#A/mindfulchampion.com>
 - Shows Vercel IP (NOT 76.76.21.21)
-

Timeline After Adding Domain

Time	What to Expect
Immediate	Domain shows “Pending” in Vercel
2-5 min	Vercel generates DNS records
5-10 min	“Verify DNS” button becomes active
10-15 min	Domain shows “Active” status
15-30 min	www.mindfulchampion.com starts working
30-60 min	Full propagation for most users
24-48 hrs	Complete global propagation

Pro Tips

Tip 1: Use Incognito Mode

Test in an incognito/private window to avoid browser cache issues

Tip 2: Test Direct URL First

Before waiting for DNS, verify the app works:

<https://nextjsspace-ochre.vercel.app>

Tip 3: Check DNS Propagation

Use this tool to see propagation progress:

<https://www.whatsmydns.net/#A/mindfulchampion.com>

Tip 4: Clear Browser Cache

After DNS propagates:

- Chrome: Ctrl+Shift+Del (Windows) or Cmd+Shift+Del (Mac)
- Clear “Cached images and files”

Still Stuck?

If the Vercel UI doesn’t match these instructions:

1. **Try the CLI method** (always reliable)
2. **Take a screenshot** of your Vercel dashboard
3. **Share the screenshot** for specific guidance
4. **Check Vercel’s docs:** <https://vercel.com/docs/concepts/projects/domains>

Last Updated: January 1, 2026, 4:55 AM

Vercel CLI Version: 50.1.3

Next Step: Add domain in Vercel dashboard or use CLI
