

Visual Guide: Update Vercel Root Directory

Step-by-Step with Screenshots

Step 1: Open Vercel Dashboard

1. Go to: **<https://vercel.com/dashboard>**
2. You should see your projects list

Click on the “mindful-champion” project card

Step 2: Go to Settings

Once in your project, you'll see tabs at the top:

Click on “Settings” tab

Step 3: Navigate to General Settings

On the left sidebar, you'll see:

Click on “General”

Step 4: Find Root Directory Section

Scroll down the General settings page. You’ll pass:

- Project Name
- Framework Preset (Next.js)
- Build & Development Settings
- Node.js Version

Keep scrolling until you see:

Click the “Edit” button

Step 5: Enter “nextjs_space”

After clicking Edit, you’ll see:

Type in the box: nextjs_space

IMPORTANT:

- ☒ Correct: `nextjs_space`
 - ☒ Wrong: `nextjs_space/`
 - ☒ Wrong: `/nextjs_space`
 - ☒ Wrong: `nextjs space` (no space!)
-

Step 6: Save Changes

After typing `nextjs_space` :

Click "Save"

You should see a success message:

Step 7: Trigger Deployment

Now that the Root Directory is set, you need to trigger a deployment.

Option A: Empty Commit (Recommended)

Open terminal and run:

Option B: Redeploy in Dashboard

1. Click on "Deployments" tab
 2. Find the latest deployment
 3. Click the "..." (three dots) button
 4. Click "Redeploy"
-

Step 8: Monitor Deployment

After triggering deployment:

1. Go to **Deployments** tab
2. You'll see a new deployment with status "Building"

```
Building...
● master
Deploy: Configure Vercel for nextjs_space... |
Just now by SilentVector001
```

Wait 1-2 minutes for it to turn green:

```
✓ Ready
● master
Deploy: Configure Vercel for nextjs_space... |
2m ago by SilentVector001
```

Step 9: Verify Build Logs

Click on the deployment to see build logs.

Look for confirmation that it's building from `nextjs_space` :

Build Logs:

```
Cloning repository...
Analyzing source code...
Installing dependencies from nextjs_space/package.json
Building Next.js application from nextjs_space/
✓ Compiled successfully
✓ Generated static pages
✓ Deployment complete
```

Key thing to verify: Logs should mention `nextjs_space/`

Step 10: Test Your Site

Open these URLs to verify everything works:

Should Work (200 OK):

- ✓ <https://mindfulchampion.com>
- ✓ <https://mindfulchampion.com/connect/tournaments>
- ✓ <https://mindfulchampion.com/train>
- ✓ <https://mindfulchampion.com/dashboard> (after login)

Should Show 404 (Expected):

-  <https://mindfulchampion.com/media>
-  <https://mindfulchampion.com/media-center>

If all looks good, reply: “Done - Everything works!”

Quick Checklist

- ☐ Opened Vercel Dashboard
 - ☐ Selected mindful-champion project
 - ☐ Clicked Settings → General
 - ☐ Found Root Directory section
 - ☐ Clicked Edit
 - ☐ Typed `nextjs_space` (exactly)
 - ☐ Clicked Save
 - ☐ Saw “Project settings updated” message
 - ☐ Triggered deployment (empty commit or redeploy)
 - ☐ Waited for deployment to complete
 - ☐ Checked build logs mention `nextjs_space`
 - ☐ Tested live site - works!
 - ☐ Confirmed `/media` shows 404
 - ☐ Replied “Done - Everything works!”
-

Troubleshooting

“Can’t find Root Directory setting”

- Make sure you’re in **Settings → General**
- Scroll down - it’s below “Build & Development Settings”
- Should be near “Node.js Version” setting

“Save button is disabled”

- Make sure you typed exactly: `nextjs_space`
- No spaces, no slashes, no extra characters

“Build failed after saving”

- Check you typed `nextjs_space` not `nextjs_space/`
- Verify in Settings that it shows: `nextjs_space`
- Check deployment logs for specific error

“Site shows 404 on all pages”

- Wait 30 more seconds - deployment might still be processing
 - Check deployment status in Deployments tab
 - Ensure Root Directory is exactly `nextjs_space`
-

After You're Done

Reply with one of these:

-  "Done - Vercel is deploying" (if you just saved the setting)
-  "Done - Deployment complete" (if deployment finished)
-  "Done - Everything works!" (if you tested and it all works)

Then I'll:

1. Verify everything
2. Clean up duplicate directories
3. Create final completion report
4. Celebrate! 🎉

Current Status: ⌚ Awaiting your Root Directory update

Time Required: 2 minutes

Difficulty: ★ Very Easy

Let's do this! 🚀
