

# Deployment Fix Report - December 28, 2025

## Problem Summary

The Vercel deployments were failing after the root directory migration (commits 5835154 and 5694fc6). The live site was stuck on an older commit (135a512) that predated the root directory move.

## Root Causes Identified

### 1. Missing Prisma Schema Files

The commit 5835154 attempted to move files from `nextjs_space/` to root, but **deleted** the Prisma schema files without adding them to the root directory:

- `prisma/schema.prisma` - **DELETED** but not moved
- `prisma/seed-media-hub.ts` - **DELETED** but not moved

This caused the build to fail because:

- `npm run build` executes `postinstall: prisma generate`
- Prisma couldn't find the schema file
- Build process crashed

### 2. Dynamic Route Configuration Missing

The `/api/admin/check-users/route.ts` file was missing the required configuration:

```
export const dynamic = 'force-dynamic';
```

Without this, Next.js tried to statically render a route that uses `getSession()`, causing a build-time error:

```
Route /api/admin/check-users couldn't be rendered statically because it used `headers`
```

### 3. Large Core Dump File in Git History

A 2.2GB "core" dump file was committed to git history, blocking all pushes:

```
File core is 2231.57 MB; this exceeds GitHub's file size limit of 100.00 MB
```

## Fixes Implemented

### Fix 1: Restore Missing Prisma Files

```
cp nextjs_space/prisma/schema.prisma prisma/schema.prisma
cp nextjs_space/prisma/seed-media-hub.ts prisma/seed-media-hub.ts
```

### Fix 2: Add Dynamic Route Configuration

Updated `app/api/admin/check-users/route.ts` :

```
// Force dynamic rendering for this route
export const dynamic = 'force-dynamic';
```

### Fix 3: Remove Large File from Git History

```
# Added to .gitignore
echo "core" >> .gitignore

# Removed from git history
git filter-branch --force --index-filter 'git rm --cached --ignore-unmatch core' --
prune-empty --all

# Force pushed to update remote
git push --force origin master
```

## Verification

### Local Build Success

```
cd /home/ubuntu/mindful_champion_deploy
npm run build
# Exit code: 0 (SUCCESS)
# All 171 pages compiled successfully
```

### Build Statistics

- Total Pages: 171
- Static Pages: 37
- Dynamic Pages: 134
- API Routes: Multiple
- Build Time: ~2-3 minutes
- Exit Code: 0 (success)

## Deployment Information

### Git Commit

- **Commit Hash:** 0c8f070
- **Commit Message:** "EMERGENCY FIX: Complete root directory migration"
- **Branch:** master
- **Pushed:** Successfully to GitHub

### Vercel Deployment

- **Monitor URL:** <https://vercel.com/dean-snows-projects/mindful-champion/deployments>
- **Project:** mindful-champion
- **Expected Build Time:** 2-3 minutes
- **Status:** Deployment automatically triggered by push

## What to Monitor

---

### 1. Vercel Dashboard

- Check that the new deployment shows “Ready” status
- Commit hash should be `0c8f070`
- Build logs should show no errors

### 2. Live Site

- Coach Kai should be fully functional (text-based, no HeyGen)
- All pages should load without errors
- API routes should work correctly

### 3. Environment Variables Required

- `ABACUS_API_KEY` - For Coach Kai functionality
- `RESEND_API_KEY` - For email notifications
- `DATABASE_URL` - Already configured
- `NEXTAUTH_SECRET` - Already configured
- `NEXTAUTH_URL` - Already configured

## Next Steps

---

1.  Monitor Vercel deployment at: <https://vercel.com/dean-snows-projects/mindful-champion/deployments>
2.  Wait for “Ready” status (typically 2-3 minutes)
3.  Test the live site at <https://mindfulchampion.com>
4.  Verify Coach Kai works with text chat
5.  Confirm all features are operational

## Technical Notes

---

### Why the Root Directory Move?

The root directory move was necessary because:

- Vercel was deploying from `nextjs_space/` which had outdated code
- The actual updated code was in the root directory
- This caused the live site to show old features (like HeyGen integration that was removed)

## Complete File Structure (Root)

```

/home/ubuntu/mindful_champion_deploy/
├── app/                # Next.js app directory
├── components/         # React components
├── lib/                # Utility libraries
├── prisma/             # ☒ NOW PRESENT (was missing)
│   ├── schema.prisma  # ☒ Restored
│   └── seed-media-hub.ts # ☒ Restored
├── public/             # Static assets
├── scripts/            # Build/utility scripts
├── types/              # TypeScript types
├── package.json        # Dependencies
├── next.config.js      # Next.js config
├── tsconfig.json       # TypeScript config
├── vercel.json         # Vercel config
└── .env                # Environment variables

```

## Rollback Plan (If Needed)

If the deployment fails:

```

# Revert to the last working commit
git reset --hard 135a512
git push --force origin master

# This will deploy the old structure from nextjs_space/

```

## Success Criteria

- ☒ Local build succeeds (exit code 0)
- ☒ All 171 pages compile without errors
- ☒ Prisma schema is present in root
- ☒ Dynamic routes configured correctly
- ☒ Large files removed from git history
- ☒ Push successful to GitHub
-  Vercel deployment shows "Ready"
-  Live site accessible at <https://mindfulchampion.com>
-  Coach Kai functional (text-based)

## Conclusion

The deployment failures were caused by an incomplete directory migration that left critical files behind. All issues have been resolved:

1. ☒ Missing Prisma schema files restored
2. ☒ Dynamic route configuration added
3. ☒ Large core dump removed from history
4. ☒ Local build verified successful
5. ☒ Changes pushed to GitHub
6.  Vercel deployment in progress

**Next action:** Monitor the Vercel deployment dashboard for the “Ready” status.
