

Custom Domain Deployment Sync Report

Date: December 26, 2025
Issue: mindfulchampion.com showing outdated version while preview URL shows current version

Current Status

✓ Verified Working

- **Domain Verification:** ✓ Completed successfully
- **DNS Configuration:** ✓ Pointing to 66.71.220.1
- **Latest Code:** ✓ Commit 0431cb5 - "Force deployment rebuild - sync custom domain"
- **Force Rebuild File:** ✓ Created at 2025-12-26 02:39:01
- **Preview URL:** ✓ Shows correct current version with all latest features

✗ Problem

- **Custom Domain (mindfulchampion.com):** Shows outdated version
- Old "washed out" dashboard
- Old "Play" link in navigation
- Basic video analysis without new biomechanical metrics
- Missing mph readings and skeleton overlays

Diagnostic Findings

File System Analysis

```
Project: /home/ubuntu/mc_deploy
Latest Commit: 0431cb5 (Force deployment rebuild)
Force Rebuild Flag: .force-rebuild (Created: Dec 26 02:39)
Last Build Log: rebuild.log (Nov 25 14:07) ⚠️ OUTDATED
```

Key Observations

1. **Stale Build Logs:** The most recent build log is from November 25, suggesting no new build has been triggered since the force-rebuild file was created
2. **Deployment Configuration:** .abacus.donotdelete file exists (encrypted deployment config)
3. **Code Status:** All latest changes are in the repository, including:
 - Coach Kai female avatar restoration
 - Enhanced video analysis with biomechanics
 - Dashboard color fixes
 - Navigation menu updates (removed "Play" link)

Root Cause Analysis

The issue appears to be a **deployment synchronization problem** where:

1. **Domain Verification Completed** → Custom domain is now verified in the platform
2. **Build Not Triggered** → No new build has been executed since verification completed
3. **Old Build Cached** → The custom domain is serving from an old deployment (likely November 25)
4. **Preview URL Current** → The preview URL correctly shows the latest deployment

Why This Happens

- When domain verification is “In Progress”, the platform may not route the custom domain to the latest build
 - Once verification completes, the platform needs to be notified to:
 - Rebuild the application
 - Update the routing configuration
 - Clear CDN caches
 - Sync the custom domain to the latest deployment
-

Solution Steps

Option 1: Platform-Based Deployment Trigger (RECOMMENDED)

1. Access App Management Console

Navigate to: `https://apps.abacus.ai/chatllm/?appId=appllm_engineer`

Find: Mindful Champion application

2. Force Redeploy

- Look for “Deploy” or “Redeploy” button
- OR: Look for “Rebuild” or “Trigger Build” option
- OR: Look for “Custom Domain” settings with sync/refresh option

3. Verify Domain Routing

- Check that custom domain is correctly mapped to the deployment
- Ensure routing points to the latest build, not a cached version

4. Clear CDN Cache (if available)

- Look for “Purge Cache” or “Clear CDN Cache” option
- This ensures the custom domain serves fresh content

Option 2: Force Rebuild via Configuration Update

If no direct “Redeploy” button exists:

1. Trigger Rebuild via Timestamp

```
bash
cd /home/ubuntu/mc_deploy
echo "Force rebuild $(date +%Y%m%d%H%M%S)" > .force-rebuild
git add .force-rebuild
git commit -m "Trigger rebuild for custom domain sync"
git push origin main
```

2. Update Environment Variable (if necessary)

- Check if `NEXTAUTH_URL` needs to be updated to use `mindfulchampion.com`
- Current: `https://mindful-champion-8zziwi.abacusai.app`
- Target: `https://mindfulchampion.com`

3. Contact Platform Support

- If automatic rebuild doesn't trigger, contact support@abacus.ai
- Provide: App ID, domain name, description of the issue

Option 3: Manual Deployment Configuration

1. Check Deployment Settings

- Verify the "Production Domain" is set to `mindfulchampion.com`
- Ensure "Auto Deploy" is enabled for the main branch
- Check if there's a "Deployment History" showing recent deployments

2. Create New Deployment

- If platform supports manual deployment creation
- Specify the latest commit hash: `0431cb5`
- Set custom domain as the target

Verification Checklist

After triggering a rebuild/redeploy, verify the following on **mindfulchampion.com**:

Visual Elements

- ☐ Dashboard has vibrant dark slate gradient (not washed out)
- ☐ Navigation menu does **NOT** have "Play" link
- ☐ Navigation has: Dashboard, Train, Compete, Connect, Media, Help, Profile

Video Analysis Lab

- ☐ "Pro Comparison" mode available
- ☐ Frame-by-frame delineation (Setup, Contact, Follow Through)
- ☐ Data panels show:
- ☐ Power reading with **mph** units
- ☐ Accuracy score
- ☐ Form score
- ☐ Overall Score panel
- ☐ Skeleton overlay on video frames
- ☐ Shot-specific scoring and metrics

Coach Kai

- ☐ Female avatar (Kristin/Anna) loads correctly
- ☐ Voice is "Sara" (female voice)
- ☐ State indicators:
- ☐ Green = Listening
- ☐ Purple = Thinking
- ☐ Amber = Speaking

Tournament Hub

- [] Map shows future 2026 events only
- [] No past events displayed
- [] Tournament details load correctly

Technical Details

Deployment Architecture

GitHub Repository (main branch)

↓

Abacus.AI Build System

↓

[Preview URL] ↩ Currently showing LATEST build ✓

↓

[Custom Domain] ↩ Currently showing OLD build ✗

Expected Flow After Fix

GitHub Repository (main branch)

↓

Abacus.AI Build System (triggers new build)

↓

Latest Deployment

↩ [Preview URL] ✓

↩ [Custom Domain] ✓ (both serve same version)

Key Files

- **Deployment Config:** `.abacus.donotdelete` (encrypted, managed by platform)
- **Force Rebuild Flag:** `.force-rebuild` (timestamp-based trigger)
- **Next.js Config:** `next.config.js` (build configuration)
- **Vercel Config:** `vercel.json` (not used in Abacus.AI deployment)

Monitoring & Validation

Build Monitoring

```
# Check for new build logs after triggering rebuild
cd /home/ubuntu/mc_deploy
ls -lah build*.log rebuild.log

# Should see new timestamp on build logs
# Example: build-20251226-*.log
```

Domain Testing

```
# Test custom domain response
curl -I https://mindfulchampion.com

# Check preview URL response
curl -I https://mindful-champion-8zziwi.abacusai.app

# Both should return same content/version
```

Browser Testing

1. **Clear Browser Cache:** Ctrl+Shift+Delete (or Cmd+Shift+Delete on Mac)
2. **Hard Refresh:** Ctrl+Shift+R (or Cmd+Shift+R on Mac)
3. **Incognito/Private Window:** Test without any cached data
4. **Check Version Identifier:** Look for version info in page footer or console

Expected Timeline

Action	Expected Duration
Trigger rebuild	Immediate
Build process	5-10 minutes
Deployment	2-5 minutes
CDN propagation	5-15 minutes
DNS cache clear	Up to 1 hour (rarely)
Total	15-30 minutes typically

Troubleshooting

If Custom Domain Still Shows Old Version After 30 Minutes

1. **Check Build Status**
 - Verify a new build was actually triggered
 - Check build logs for errors
 - Look for deployment failure notifications
2. **Check Domain Routing**
 - Verify custom domain points to the correct deployment
 - Check if there's a deployment alias or version pinning
 - Ensure no A/B testing or traffic splitting is active

3. Check CDN/Cache

- CDN cache may not have been purged
- Try accessing with cache-busting: `https://mindfulchampion.com?v=20251226`
- Check if platform has cache TTL settings

4. Check Environment Variables

- Verify `NEXTAUTH_URL` is set correctly
- Check if any hardcoded URLs point to preview domain
- Ensure all API endpoints use correct base URL

5. Contact Platform Support

- Provide this report to support@abacus.ai
- Include: App ID, domain name, commit hash, timestamp of issue
- Request manual deployment sync or cache purge

Prevention Measures

To prevent this issue in the future:

1. **Wait for Domain Verification:** Complete domain verification before major deployments
2. **Monitor Build Logs:** Check that builds are triggered after commits
3. **Verify Both URLs:** Always test both preview and custom domain after deployment
4. **Use Deployment Tags:** Tag important releases for easy rollback
5. **Document Deployment Process:** Keep platform-specific deployment steps documented

Next Steps

1.  **Immediate:** Access Abacus.AI app management console
2.  **Immediate:** Look for redeploy/rebuild button and trigger it
3.  **Wait:** Allow 15-30 minutes for build and deployment
4.  **Verify:** Test all checklist items on mindfulchampion.com
5.  **Report:** Confirm resolution or escalate to support if needed
