

Issue Resolution Guide

Date: December 22, 2024

Issues Identified: DNS Configuration, Program Data, Login Problems

Status Summary

Issue	Status	Severity
Vercel Site	 Working	None
Custom Domain DNS	 Blocked (HTTP 403)	HIGH
Program Schedule	 Empty Data	HIGH
User Login	 Affected by DNS	Medium

1. CLOUDFLARE DNS ISSUE (Priority #1)

Current Situation:

-  **Vercel URL working:** <https://mindful-champion.vercel.app> (HTTP 200)
-  **Custom domain blocked:** <https://www.mindfulchampion.com> (HTTP 403 Forbidden)
- The domain IS going through Cloudflare but is being blocked

Root Cause:

Cloudflare proxy is enabled (orange cloud icon) which causes Vercel to reject the connection with HTTP 403.

Solution: You MUST Do This Yourself

Step 1: Access Cloudflare

1. Go to <https://dash.cloudflare.com/>
2. Log in with the email you used to register **mindfulchampion.com**
 - Try: deansnow59@gmail.com or dean@mindfulchampion.com
 - If password doesn't work, click "Forgot Password"
3. Look for **mindfulchampion.com** in your domain list

Step 2: Fix DNS Records

1. Click on **mindfulchampion.com**
2. Click **"DNS"** in the left sidebar
3. Find these records and **DELETE** them if they exist:
 - Any A record for `@` or `www`
 - Any CNAME record for `@` or `www`

4. **ADD** these new records:

Record 1: WWW subdomain

Type: CNAME
 Name: www
 Target: cname.vercel-dns.com
 Proxy status: DNS only (GRAY CLOUD , NOT orange)
 TTL: Auto

Record 2: Root domain

Type: A
 Name: @
 IPv4 address: 76.76.21.21
 Proxy status: DNS only (GRAY CLOUD , NOT orange)
 TTL: Auto

Step 3: CRITICAL - Disable Cloudflare Proxy

- Next to each DNS record, there's a cloud icon
- It MUST be **GRAY** (DNS only)
- If it's **ORANGE** (proxied), **CLICK IT** to turn it gray
- **This is the #1 cause of the HTTP 403 error**

Step 4: Verify in Vercel

1. Go to <https://vercel.com/dashboard>
2. Click on your **mindful-champion** project
3. Click **"Settings"** → **"Domains"**
4. Add domain: `www.mindfulchampion.com`
5. Vercel will show you the correct DNS settings to verify

2. PROGRAM SCHEDULE LOADING ISSUE (Priority #2)

Root Cause Identified:

The "Spin & Power Mechanics" program has an **EMPTY days array** in the database:

```
{
  "days": [] // ❌ This is empty!
}
```

This is why you see the "Program Schedule Loading" error.

Affected Programs:

-  **Pickleball Fundamentals** - Has data (working)
-  **Serve & Return Mastery** - Empty
-  **Third Shot Excellence** - Empty
-  **Spin & Power Mechanics** - Empty (the one in your screenshot)

Solution:

I need to populate these programs with real daily training data. This requires running a database migration script.

Would you like me to:

1.  **Option A:** Populate all training programs with complete daily schedules
2.  **Option B:** Only fix "Spin & Power Mechanics"
3.  **Option C:** Regenerate all programs from scratch with new AI content

3. LOGIN ISSUE

Analysis:

Your login issue is likely caused by:

1. **DNS mismatch:** Trying to log in at www.mindfulchampion.com (blocked) instead of the working Vercel URL
2. **Cookie domain issues:** Cookies set on one domain don't work on another
3. **Session storage:** NextAuth sessions might be tied to the working domain

Temporary Workaround:

Use the Vercel URL directly until DNS is fixed:

- Go to: <https://mindful-champion.vercel.app>
- Log in there
- Once DNS is fixed, the custom domain will work

Test Your Login:

Try logging in with your email: **deansnow59@gmail.com**

If you don't remember the password:

1. Go to <https://mindful-champion.vercel.app/auth/forgot-password>
2. Enter your email
3. Check your inbox for the reset email (check spam too)

IMMEDIATE ACTION PLAN

What You Need to Do NOW:

1. **[5 mins] Access Cloudflare**
 - Go to <https://dash.cloudflare.com/>
 - Reset password if needed
 - Find mindfulchampion.com domain
2. **[3 mins] Fix DNS Records**
 - Delete old records
 - Add the two records I listed above
 - **MAKE SURE CLOUDS ARE GRAY, NOT ORANGE**

3. [2 mins] Verify

- Wait 5-10 minutes for DNS propagation
- Test <https://www.mindfulchampion.com>
- Should now redirect to your working Vercel site

4. [1 min] Confirm to Me

- Tell me when DNS is fixed
- I'll then fix the program schedule data issue

What I Will Do:

Once you confirm DNS is working, I will:

1. ☒ Populate all empty training programs with complete daily schedules
2. ☒ Fix the "Spin & Power Mechanics" program data
3. ☒ Test the program viewer on multiple programs
4. ☒ Deploy the fixes to production

**IF YOU CANNOT ACCESS CLOUDFLARE****Alternative Solutions:****Option 1: Transfer to Vercel DNS**

1. Go to your domain registrar (where you bought [mindfulchampion.com](https://www.mindfulchampion.com))
2. Change nameservers from Cloudflare to Vercel
3. Follow: <https://vercel.com/docs/projects/domains/working-with-domains>

Option 2: Contact Cloudflare Support

1. Go to: <https://support.cloudflare.com/hc/en-us>
2. Submit a ticket for "Account Recovery"
3. Prove domain ownership through your registrar

Option 3: Keep Using Vercel URL

- Just use <https://mindful-champion.vercel.app> permanently
- Update all your links and bookmarks
- Custom domain is optional (but looks more professional)

**VERIFICATION CHECKLIST**

After fixing DNS, verify these work:

- ☐ <https://www.mindfulchampion.com> loads (not HTTP 403)
- ☐ Redirects to Vercel or shows the site
- ☐ Login works on the custom domain
- ☐ No SSL certificate errors
- ☐ DNS propagation complete (use <https://dnschecker.org/>)

After I fix program data:

- ☐ "Spin & Power Mechanics" shows daily schedule

- [] Can click “Continue Today” button
- [] Daily exercises and drills display properly
- [] Progress tracking works

TECHNICAL DETAILS

DNS Records Explained:

- **CNAME for www:** Points www.mindfulchampion.com → Vercel
- **A record for @:** Points mindfulchampion.com → Vercel’s IP
- **Gray cloud:** DNS only (required for Vercel)
- **Orange cloud:** Cloudflare proxy (causes HTTP 403 with Vercel)

Database Issue:

```
-- Current state (broken):
TrainingProgram {
  name: "Spin & Power Mechanics",
  dailyStructure: { days: [] } // Empty!
}

-- Fixed state (working):
TrainingProgram {
  name: "Spin & Power Mechanics",
  dailyStructure: {
    days: [
      { day: 1, title: "...", exercises: [...] },
      { day: 2, title: "...", exercises: [...] },
      ...
    ]
  }
}
```

NEED HELP?

I cannot:

-  Access your Cloudflare account (security restriction)
-  Log in with your credentials
-  Modify your domain registrar settings

I can:

-  Guide you through the exact steps
-  Fix the database/code issues
-  Test the site after DNS is fixed
-  Populate program data
-  Deploy fixes to production

Next Steps:

1. Try to access Cloudflare with the steps above
2. Let me know if you successfully log in
3. Share a screenshot of your DNS settings
4. Tell me if you want me to fix the program data issue now or wait until DNS is resolved

Estimated Time to Resolution:

- DNS Fix: 5-10 minutes (if you can access Cloudflare)
- DNS Propagation: 5-30 minutes
- Program Data Fix: 10-15 minutes (I'll do this)
- **Total: ~30-45 minutes to full functionality**
