

Tournament Page Error Fix

Issue

The tournaments page at www.mindfulchampion.com/tournaments was crashing with a client-side error:

```
Application error: a client-side exception has occurred (see the browser console for more information).
```

The root cause was: A `<Select.Item />` must have a value prop that is not an empty string

Additionally, there were duplicate “Tournaments” navigation entries in the header.

Root Cause Analysis

1. Select.Item Empty String Values

In `/components/tournaments/tournament-filters.tsx`, the Select components were rendering with empty string values:

- State filter: `<SelectItem value="">All states</SelectItem>`
- Skill Level filter: `<SelectItem value="">All levels</SelectItem>`
- Format filter: `<SelectItem value="">All formats</SelectItem>`

Radix UI’s Select component does not allow empty strings as values, which caused the client-side crash.

2. Duplicate Navigation Links

In `/components/navigation/main-navigation.tsx`, there were two separate Tournaments navigation items:

- Lines 558-632: A Tournaments dropdown menu with multiple sub-items
- Lines 725-745: A standalone Tournaments link

This created confusion and cluttered the navigation.

Fixes Applied

1. Fixed Select.Item Empty String Values

File: `/components/tournaments/tournament-filters.tsx`

Changed all Select components to use “all” instead of empty strings:

```
// Before
<SelectItem value="">All states</SelectItem>
value={filters?.state ?? ''}

// After
<SelectItem value="all">All states</SelectItem>
value={filters?.state || 'all'}
```

Updated the `handleFilterChange` function to convert "all" back to empty string for API calls:

```
const handleFilterChange = (key: keyof FilterState, value: string) => {
  // Convert "all" to empty string for state, skillLevel, and format filters
  const actualValue = (value === 'all') ? '' : value;
  const newFilters = { ...filters, [key]: actualValue };
  setFilters(newFilters);
  onFilterChange(newFilters);
};
```

Added filtering to remove any null/undefined/empty states from the dropdown:

```
{{(states ?? []).filter(state => state && state.trim() !== '').map((state) => (
  <SelectItem key={state} value={state}>
    {state}
  </SelectItem>
))}}
```

2. Removed Duplicate Navigation Link

File: `/components/navigation/main-navigation.tsx`

Removed the standalone Tournaments link (lines 725-745), keeping only the comprehensive Tournaments dropdown menu that includes:

- Tournament Scout (main tournaments page)
- Championship Events
- Amateur Competitions
- Rising Stars
- Community Leagues
- Pickleball for Purpose

Files Modified

1. `/components/tournaments/tournament-filters.tsx` - Fixed `Select.Item` empty string values
2. `/components/navigation/main-navigation.tsx` - Removed duplicate Tournaments link

Testing

- ✓ Build successful: `npm run build` completed without errors
- ✓ Dev server starts correctly: `npm run dev` runs without issues
- ✓ No more empty string values in `SelectItem` components

Verification Steps

To verify the fix in production:

1. Navigate to `www.mindfulchampion.com/tournaments`
2. Page should load without errors
3. Filter dropdowns (State, Skill Level, Format) should work correctly
4. Navigation header should show only one Tournaments dropdown (no duplicate)
5. All tournament filtering should function as expected

Impact

- **User Experience:** Tournaments page now loads without errors
- **Navigation:** Cleaner, less cluttered navigation with single Tournaments dropdown
- **Filtering:** All filter dropdowns work correctly without crashes
- **Mobile/Desktop:** Fix applies to both mobile and desktop views

Next Steps

1. Monitor production for any related issues
2. Consider adding error boundaries around Select components for future safety
3. Add validation to ensure all Select.Item values are non-empty strings
