

# Email System Audit Report

---

**Date:** December 22, 2025

## Summary

---

The app uses **Resend** as its email provider. Several email types are **NOT triggered** from their respective flows.

---

## **BROKEN: Video Upload Confirmation Emails**

---

**Status:** NOT IMPLEMENTED

**Location:** `/app/api/video-analysis/confirm-upload/route.ts`

**Issue:** The video upload confirmation endpoint creates a database record and logs activity, but **does NOT send any email notification** to the user.

**Fix Required:** Add email sending after successful upload:

```
import { UnifiedEmailService } from '@lib/email/unified-email-service';
// After video record created:
await UnifiedEmailService.sendEmail({
  type: 'VIDEO_UPLOAD_CONFIRMATION',
  userId: user.id,
  recipientEmail: session.user.email,
  recipientName: session.user.name || 'User',
  videoTitle: title
});
```

## **BROKEN: Signup Welcome Emails**

---

**Status:** PARTIALLY IMPLEMENTED (may be failing silently)

**Location:** `/app/api/signup/route.ts` (line 148)

**Issue:** The code calls `MediaCenterEmailService.sendWelcomeEmail(user.id)` but:

1. Email failure is caught and swallowed silently
2. No indication to user if email failed
3. Depends on `RESEND_API_KEY` being properly configured

**Verification Needed:**

- Check Vercel env vars for `RESEND_API_KEY`
  - Check Resend dashboard for delivery logs
-

## **LIKELY WORKING: Reminder Emails**

These appear configured but need production verification:

- Goal notifications ( `lib/notifications/goal-notifications.ts` )
- Subscription expiring emails
- Tournament reminders

## Email Types in System

| Email Type              | Triggered From                                       | Status            |
|-------------------------|------------------------------------------------------|-------------------|
| Welcome (Signup)        | <code>/api/signup</code>                             | ⚠️ Check logs     |
| Password Reset          | <code>/api/auth/forgot-password</code>               | ✅ Implemented     |
| Video Upload Confirm    | <code>/api/video-analysis/confirm-upload</code>      | ❌ NOT IMPLEMENTED |
| Goal Reminders          | <code>lib/notifications/goal-notifications.ts</code> | ⚠️ Verify         |
| Subscription Confirm    | <code>UnifiedEmailService</code>                     | ✅ Available       |
| Subscription Expiring   | <code>UnifiedEmailService</code>                     | ✅ Available       |
| Tournament Registration | <code>UnifiedEmailService</code>                     | ✅ Available       |
| Reward Redemption       | <code>UnifiedEmailService</code>                     | ✅ Available       |

## Environment Requirements

```
RESEND_API_KEY=re_xxxxx # Must be set in Vercel
```

**Domain Verification:** `mindfulchampion.com` must be verified in Resend dashboard.

## Recommended Actions

1. **Add video upload confirmation email** to `/app/api/video-analysis/confirm-upload/route.ts`
2. **Verify RESEND\_API\_KEY** is correctly set in Vercel production environment
3. **Check Resend dashboard** (<https://resend.com/emails>) for delivery status
4. **Add email template** for VIDEO\_UPLOAD\_CONFIRMATION type in UnifiedEmailService
